“A prototype is worth a thousand meetings.” — IDEO

Introduction

This document presents the Low-Fidelity Prototype for the TripSync app, created during the “Going on Holidays” UX project. It represents the early paper-based version of the product, translating the user flow into visual sketches to test basic structure and interactions.

Prototype Overview

The following pages show the paper sketches representing the TripSync experience. Each sketch corresponds to one major screen from the user flow, drawn by hand and annotated with small notes to indicate user interactions.

Start & Login Screen

Create Trip Screen

CREATE TRIP

Trip Name → user types here

Destination → select destination

Dates → select start & end dates

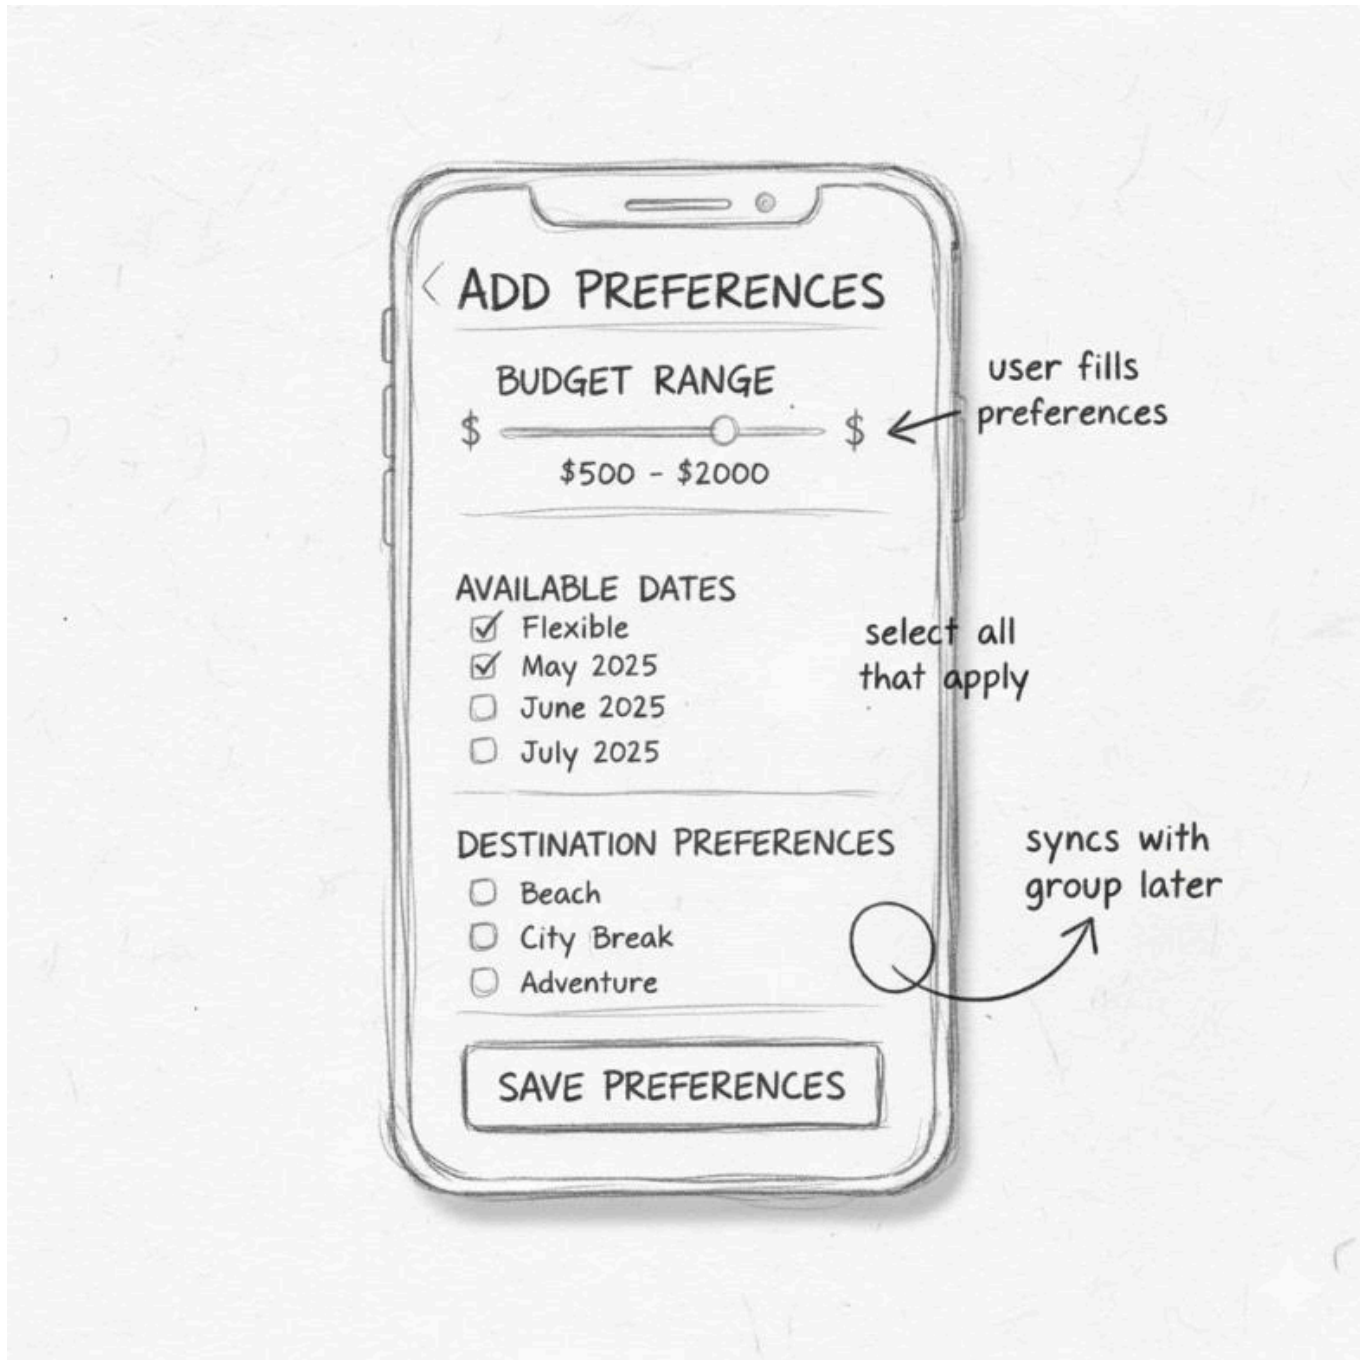

Create Trip → next → invite friends

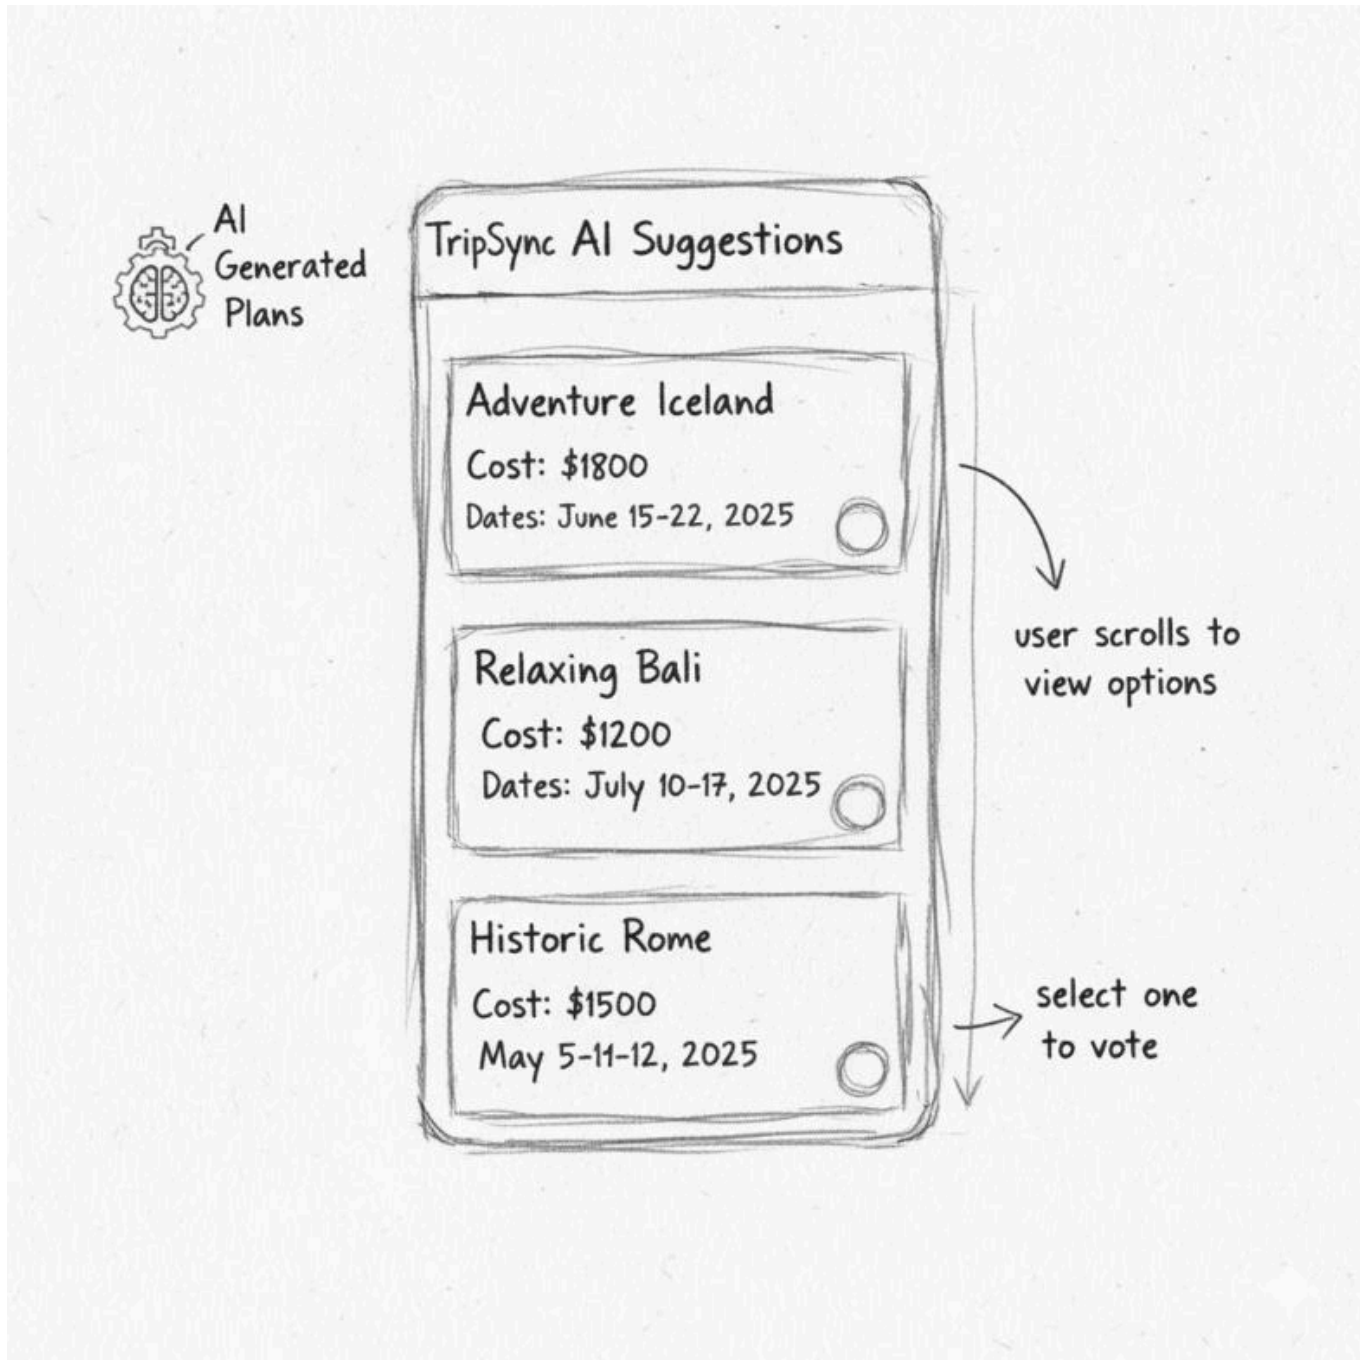

Invite Friends Screen

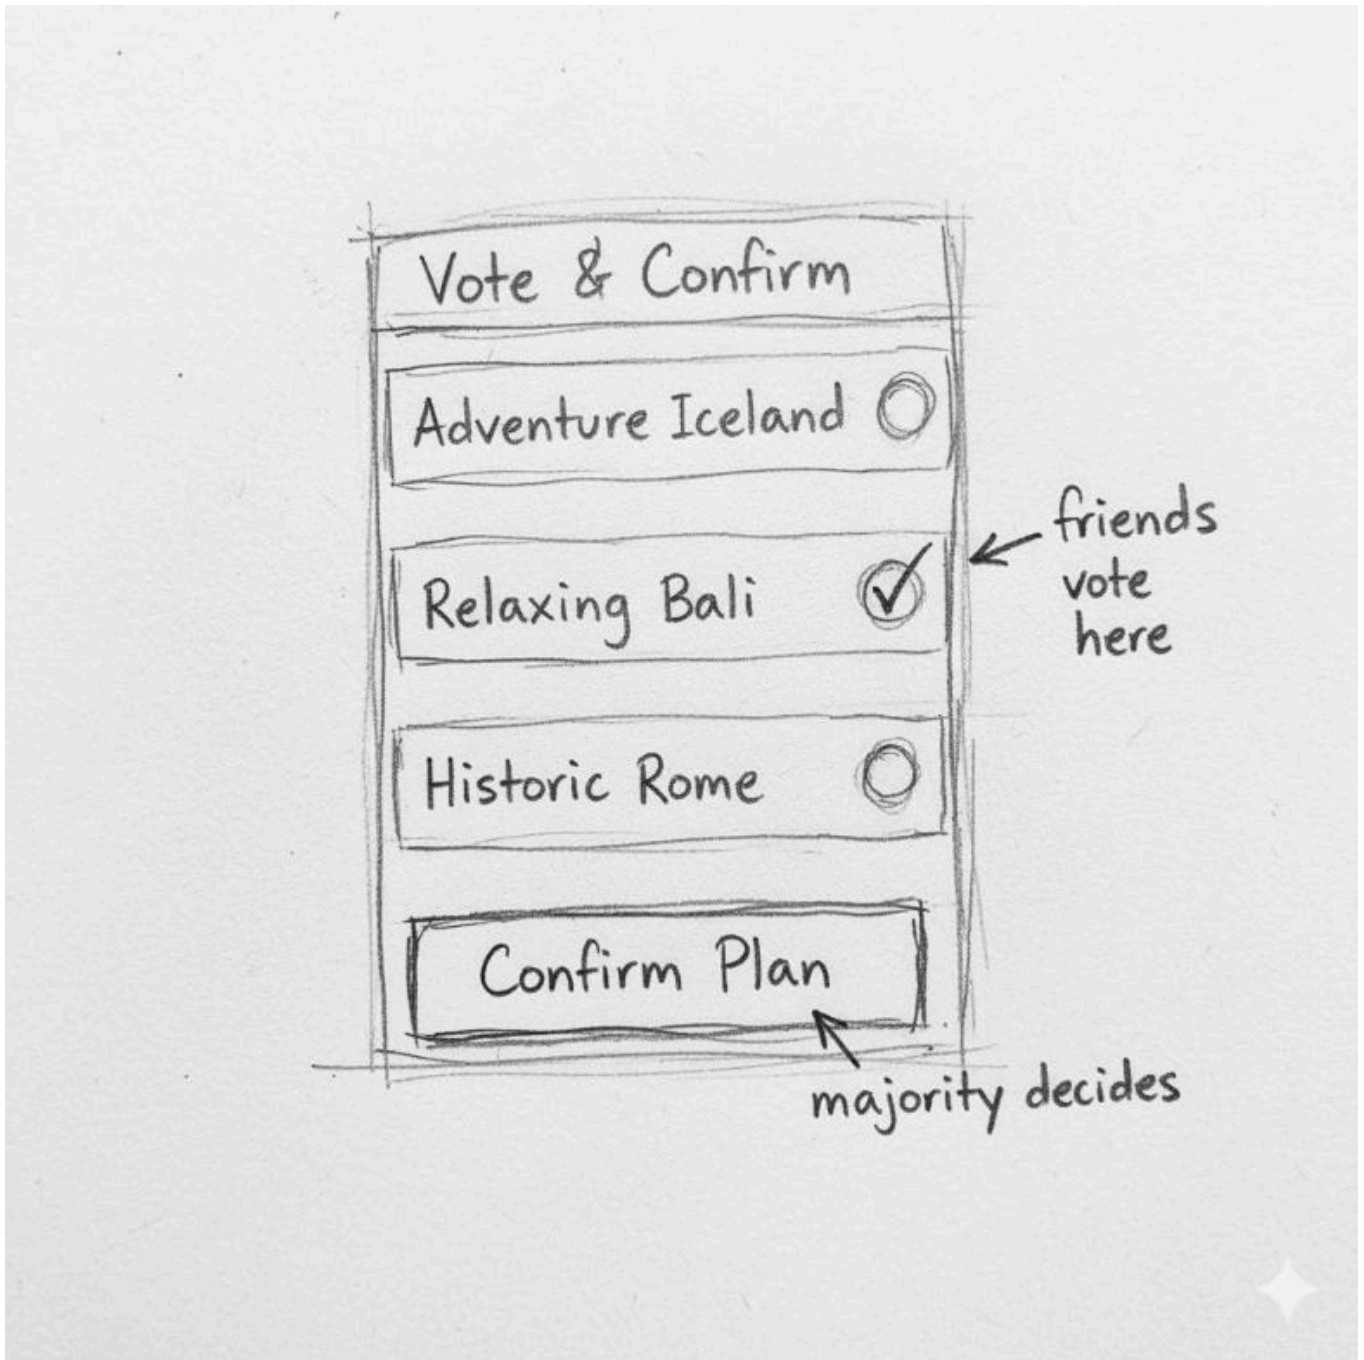

Add Preferences Screen

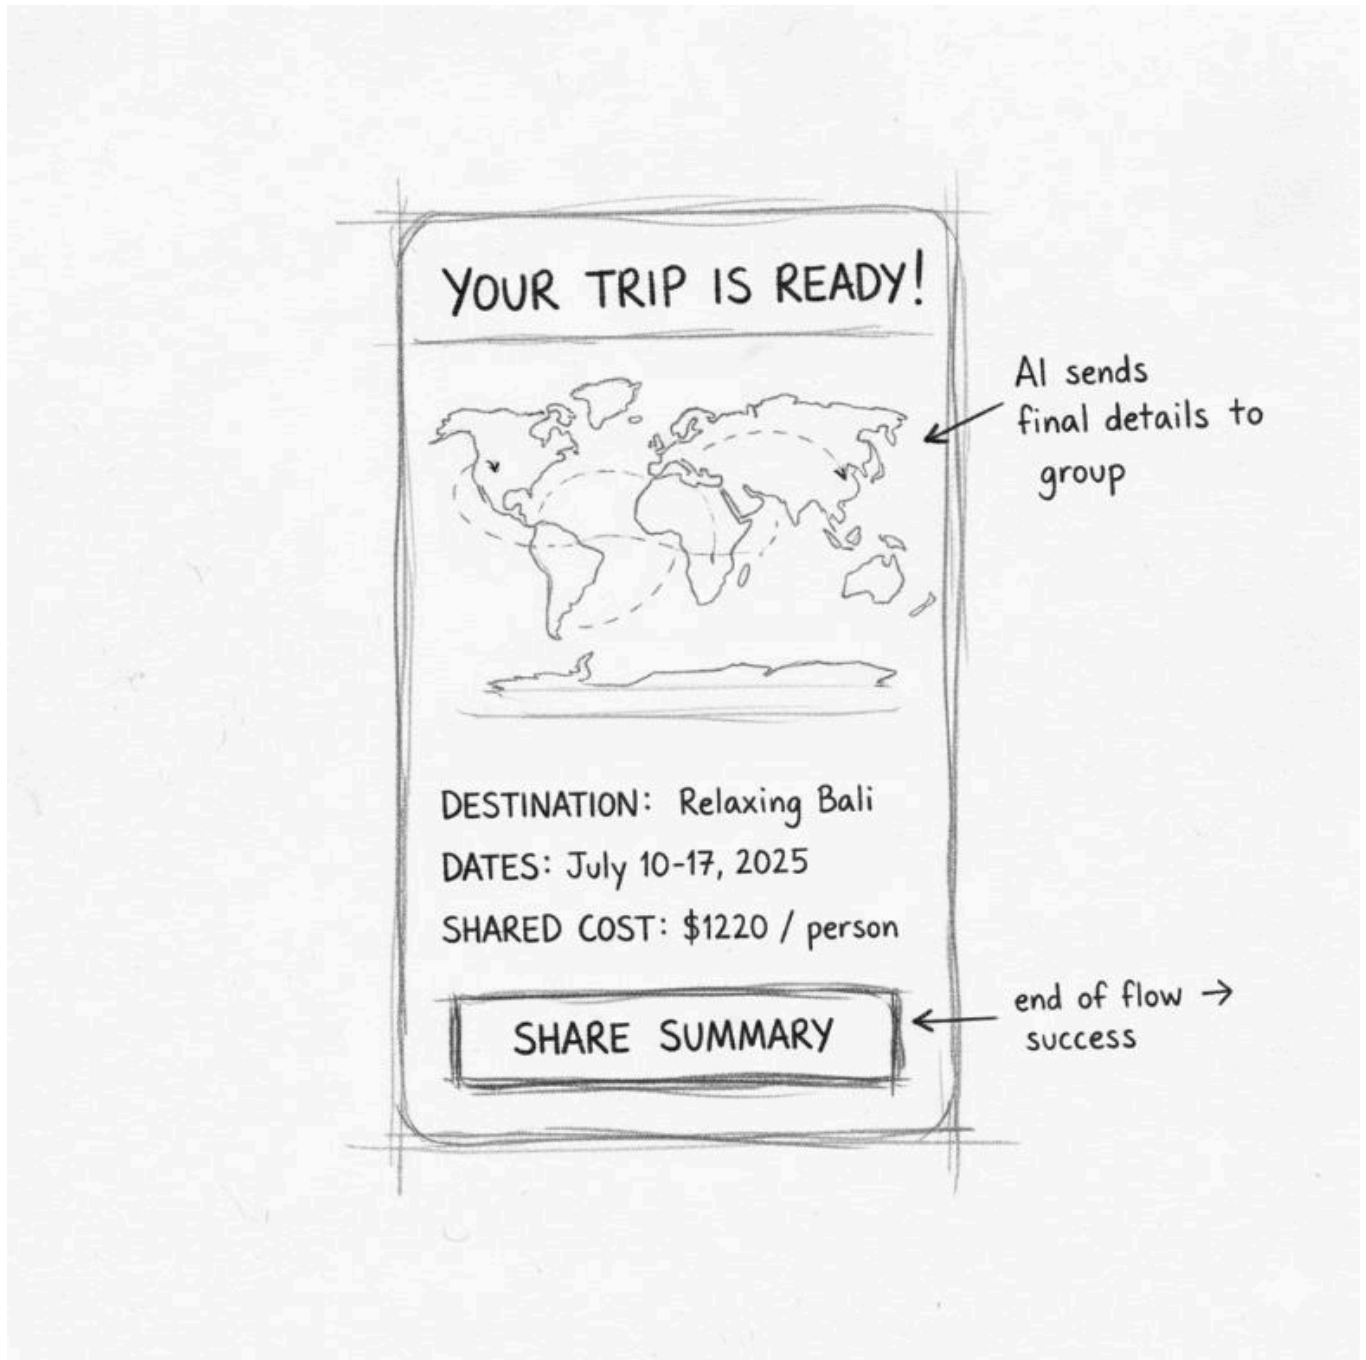

AI Suggestions Screen

Vote & Confirm Screen

Trip Summary Screen

Conclusion

This low-fidelity prototype helped visualize the app's main interactions quickly and test the user flow before digital design. The next step will focus on translating these sketches into Mid-Fidelity Wireframes using Figma.
